GOLD CAP SST TUBE >>>

GOLD CAP tube contains a clot activator and serum gel separator. This tube can be used for various chemistry, serology and immunology tests. After centrifugal, the specimen will be separated into three parts, namely: serum, separation gel and blood corpuscle. The thick layer of separation gel ensures complete isolation of the serum from the blood corpuscle.

ORANGE CAP PRO-COAGULATION TUBE >>>

ORANGE CAP Pro-coagulation tube is used in the blood collection for biochemistry and immunology in medical inspection. It is suitable for wide range of operating temperature. With special treatment, the surface inside the tube is exceptionally smooth with high-quality coagulant sprays uniformly. The blood sample will completely contact with coagulant and clot within 5-8min. High-quality serum thus is obtained by later centrifugation, free from the cracking of blood corpuscle, haemolysis, separation of fibrin protein, etc. Hence the serum can meet the requirements of fast clinic and emergency medicine.
